## Reviews

*Merely no words to clarify. I could comprehend every little thing using this created e pdf. I am just effortlessly could possibly get a enjoyment of reading through a created publication.*  
*(Mr. Ari Powlowski)*

# ASSESSMENT OF PHYSICAL, CHEMICAL, AND HYDROLOGIC FACTORS AFFECTING THE INFILTRATION OF TREATED WASTEWATER IN THE NEW JERSEY COASTAL PLAIN, WITH EMPHASIS ON THE HAMMONTON LAND APPLICATION FACILITY: USGS REPORT 2010-5006

To read **Assessment of Physical, Chemical, and Hydrologic Factors Affecting the Infiltration of Treated Wastewater in Thenew Jersey Coastal Plain, with Emphasis on the Hammonton Land Application Facility: Usgs Report 2010-5006** PDF, remember to click the web link beneath and download the ebook or have accessibility to other information which are in conjuction with ASSESSMENT OF PHYSICAL, CHEMICAL, AND HYDROLOGIC FACTORS AFFECTING THE INFILTRATION OF TREATED WASTEWATER IN THENEW JERSEY COASTAL PLAIN, WITH EMPHASIS ON THE HAMMONTON LAND APPLICATION FACILITY: USGS REPORT 2010-5006 book.

Bibliogov, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.A hydrogeologic and water-quality investigation of the Hammonton Land Application Facility (Hammonton LAF) in Hammonton, New Jersey, was conducted to determine the factors that impede the infiltration of treated wastewater and to assess the potential for similar conditions to exist elsewhere in the Coastal Plain of New Jersey (particularly within the Pinelands National Reserve). Gamma logs, sediment cores, and hydraulic-profile testing indicate that extensive fine-grained strata and iron-cemented sands underlying the Hammonton LAF may impede infiltration and lead to the perching of diluted treated wastewater. Perched water was observed in augured holes adjacent to infiltration trenches, and analysis of wastewater loading and infiltration data indicates that infiltration trenches may receive lateral flow from multiple perched-water sources. Analysis of water-quality properties characteristic of treated wastewater show that although infiltrated wastewater is reaching the underlying aquifer, lengthy holding times and a long recharge pathway greatly reduce the concentrations of nitrate, boron, and many organic compounds typical of wastewater. Conditions at two currently operating facilities and one potential future facility in the New Jersey Coastal Plain were compared to those at the Hammonton Land Application Facility (LAF). Facilities operating as designed are not underlain by the restrictive strata that exist at the Hammonton LAF. Careful characterization of the geology and hydrology of the unsaturated zone underlying infiltration structures of future facilities in the New Jersey Coastal Plain and similar hydrogeologic settings will help to avoid constructing infiltration structures over or within low-hydraulic-conductivity strata that will decrease infiltration rates.
